Objective

Highly motivated and disciplined cybersecurity student with a **3.68 cumulative GPA** with strong foundation in structured problem-solving and logic. Two years from now I see myself as a professional cybersecurity expert who will help and protect this beautiful country.

Skills

- **Technical:** Algorithm Logic, Structures problem Solving.
 - **Software:** Windows OS, Microsoft Office Suite (Excel, Word).
 - **Language:** English (Fluent), **Amharic (Native/Bilingual).**
 - **Personal:** Strong Work Ethic, Detail-Oriented, High Integrity, Commitment to Public Services.
-

Education

- **Metropolitan State University of Denver** | Denver, CO Excepted December 2028
Bachelor of Science in Cybersecurity | Spring 2025 – Present
 - Structured Problem Solving - CIS-2110-003 - Fall 2025
 - Telecomm Sys and Networking - CIS-3230-003 - Spring 2026
 - **Community College of Aurora** | Aurora, CO
Transfer Major: Computer Science | Spring 2024 – Fall 2024
 - **Cumulative GPA: 4.0**
 - **Honors:** President's List (Fall 2024), Phi Theta Kappa Society
-

Class Experience

Fall 2025

- **Academic Problem-Solving Projects (Structured Problem Solving), MSU Denver**
 - Constructed comprehensive Pseudocodes, Humanual and program level walkthroughs for complex problem statements, inputs and outputs. which solve real life problems that can be implemented into the computer by translating it into python language the computer understands (e.g., GPA calculation of a class).
-

Projects

- **Mood Report Program Design**
 - **Project Overview 1**

This project is an assignment that I completed while taking Structured problem Solving course. It focuses on designing the logic for a Mood Report program. The program first accepts a student ID and a mood score, then categorizes the mood, and calculates summary information including the average, highest, and lowest mood scores. To finalize the project, I developed an input/output design, flowchart, hierarchical chart, Humanual and program level walkthrough, and pseudocode. This project really helped me practice structured problem solving, program logic, and algorithm design.
- **Date Format Conversion - Leap Year Determination**
 - **Project Overview 2**

This project focused on designing the first part of a Date Format Conversion program. The program accepts a client number and dates in month/day/year format and determines whether each date occurred during a leap year. It also produces summary

information including the number of leap-year dates, the number of non-leap-year dates, the percentage of dates that occurred during leap years, and the most recent leap year. To develop the solution, I completed a problem statement and input/output design, walkthroughs, and a hierarchy chart. This project helped me practice structured problem solving, program logic, testing, and program design.

Work Experience

Driver

January 2025 – January 2026

Mid-Ride LLC, Denver, CO

- Driving children with special needs from home to school and from school to home, all while taking care of them.

Delivery Driver

May 2026 –July 2026

Amazon/White Rabbit, Thornton, CO

- Delivering packages to customers in a neat and timely matter.

AWARDS & MEMBERSHIPS

- President's List: Recognized for maintaining a 4.0 GPA at Community College of Aurora.
- Invited Member: Phi Theta Kappa Society, National Society of Collegiate Scholars (NSCS).
- Scholarship Recipient: Western Union Immigrant Scholarship, and other scholarships.
- Awarded Honor with Distinction for Spring 2026 at MSU Denver.
